

Sub
B1

1. (Amended) A solid composition comprising
an aqueous phase, and
an oily phase, which includes
a silicone emulsifier and
a wax, wherein
the aqueous phase is dispersed in the oily phase;
the aqueous phase is present in at least 70% by weight with respect to the total weight
of the composition;
the wax is present in at least 3% by weight with respect to the total weight of the
composition;
the solid composition exhibits a compressive strength of greater than or equal to 50
grams, at room temperature, after penetration by a cylindrical probe having a diameter of 0.8
cm into the composition over a thickness of 5 mm at a rate of 1 mm/s; and
the composition comprises at least 65% water with respect to the total weight of the
composition.

A2

21. (Amended) A method for treating greasy skin, comprising applying the
composition of Claim 1 to greasy skin, wherein said composition is in the form of a cast
cream.

✓ Please add new Claims 22-24 as follows.

--22. (New) The composition according to Claim 1, wherein the composition
comprises at least 70% water with respect to the total weight of the composition.

A3

23. (New) A method of making a composition, the method comprising
dispersing an aqueous phase in an oily phase; and
forming the composition of Claim 1.
